

```
var steps = 0
```

```
/*:
```

In addition to tracking steps, your fitness tracking app tracks distance traveled. Create a variable `distance` of type `Double` and set it equal to 50. This will represent the user having traveled 50 feet.

You decide, however, to display the distance in meters. 1 meter is approximately equal to 3 feet. Use a compound assignment operator to convert `distance` to meters. Print the result.

```
*/
```

```
var distance: Double = 50.0
```

```
distance /= 3
```

```
/*:
```

[Previous](@previous) | page 4 of 8 | [Next: Exercise – Order of Operations](@next)

```
*/
```
