## App Exercise — Ternary Messages

 >These exercises reinforce Swift concepts in the context of a fitness
  tracking app.

 The code below should look similar to code you wrote in the Fitness Decisions
  exercise. The if-else statement is actually unnecessary, and instead you can
  print either one statement or the other all on one line using the ternary
  operator. Go ahead and refactor the code below to do just that.
 */
let stepGoal = 10000
let steps = 3948

var percentDone: String

percentDone = steps < stepGoal / 2 ? "Almost Halfway!" : "Over Halfway!"

print(percentDone)
